

## AptusPAR Identity Security Solutions

Effective Identity Security is crucial for safeguarding sensitive data and ensuring that the right individuals have the right access at the right time. By implementing a robust Identity Security framework, including key components such as IAM (Identity and Access Management) and PAM (Privileged Access Management), organizations can improve compliance and reduce the risk of unauthorized access.

As your partner in growth, AptusPAR enlists industry-recognized experts who represent the best humans to “get the job done” across the Identity and Access Governance, Zero Trust, Enterprise Governance & Compliance, DevSecOps, and Cybersecurity fields.

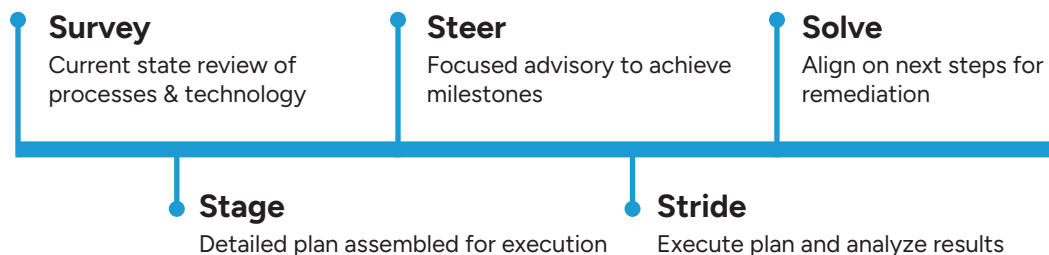

Across the Zero Trust spectrum, AptusPAR has the capabilities to cover:

I wish I could hire you to run our entire security organization. You take a whole program approach to identity security, which is exactly how we needed to approach this.”

– CISO, F500 Insurer

Our team works hard to establish meaningful relationships as a strategic advisor with our clients through listening, transparency, and honest assessments.

Rather than solving a point-in-time technical challenge, we take a “humans and process first, technology second” approach. We step outside of the box to first understand the underlying process issues which lead to risks and gaps and develop an understanding of the business objectives. A consultative approach ensures that security initiatives are aligned prior to recommending any solutions, and because we are technology-agnostic, our recommendations focus on aligning the right solution and plan to address your challenge. We don’t just stop there — we help you execute the plan and sustain the solution.

## A Solid Partnership Creates Happy Clients

Our thoughtful approach to Identity Security has resulted in many success stories, including:

- **Large State University:** Modernized, automated, and consolidated their approach to Identity, Governance, and Administration (IGA) across over five-million identities. Deployment traversed multiple technical solutions (including SAP) to onboard over 100,000 users for fully enabled virtual academics.
- **Non-profit Healthcare System:** Existing home-grown IAM system was heavily integrated into a customized ServiceNow instance and not sustainable for anticipated growth. Working in parallel with an in-process Oracle HR implementation, AptusPAR delivered a successful SailPoint IdentityIQ (IIQ) platform with Epic EMP integration.
- **Top Ten Medical Center:** New SailPoint IIQ deployment failed Day 1. Healthcare providers lost access to Epic systems and critical platforms, creating instant patient-care risk. AptusPAR performed a detailed persona and process assessment, focusing on the lack of standardized processes across multiple user types, not the tool, to enable a successful redeployment of the IIQ platform.
- **Large Retailer:** Implemented both SailPoint Identity Security Cloud and IIQ, meeting tight timelines and IAM goals with professionalism and deep IAM knowledge.

## Technical Partners

Our client-focused, tool-agnostic engagement philosophy allows us to recommend and customize the right tools for our clients’ unique challenges. We are proud to partner with best-in-breed technology and advisory companies throughout the industry:
